

## Borosilicate Glass Bottle

**EAN:** 8425402247754    **FABRICANTE:** ALKANATUR

*The Alkanatur bottle is made of high quality borosilicate glass and comes with a neoprene sleeve.*

### DESCRIPTION

The Alkanatur bottle is made of high quality borosilicate glass and comes with a neoprene sleeve.

This ecological bottle is free of lead and heavy metals, making it safe for you to use. It has a capacity of 500 ml and has a screw cap made of stainless steel.

The borosilicate glass used in this bottle does not retain odors or flavors, ensuring a pure tasting experience. Plus, it's suitable for both hot and cold drinks, making it a versatile option.

Cleaning the bottle is easy as it can be washed by hand or in the dishwasher. It is also possible to add ice cubes to keep drinks cool.

The accompanying neoprene sleeve provides additional protection against breakage and shock.

The borosilicate glass used in the bottle is safe and does not contain any toxic substances. It is a special glass with a fine pore structure that gives it a clear and light appearance, as well as a particularly beautiful shine.

This type of glass is tasteless and odorless, does not change color and offers high chemical and mechanical resistance.

Borosilicate glass is very resistant and suitable for utensils that require heat resistance, such as baking trays or ceramic hobs.

Today, most high-quality laboratory glassware is made from borosilicate glass. It is also a preferred choice in medical technology for the packaging of liquids, due to its resistance to breakage and chemicals. In addition, its low coefficient of expansion makes it ideal for telescope mirrors. Thanks to its brilliance and durability, borosilicate glass is particularly suitable for everyday use.
