It acts as an antioxidant, has an anti-aging effect, protects DNA.

### Explanation:

#### Alfalfa ( *Medicago sativa* )

Chlorophyll is a natural antioxidant that helps maintain general health, slows aging by acting against free radicals, and prevents numerous diseases.

It is a regulator of general metabolism, especially of cholesterol and triglycerides.

It also purifies the blood and oxygenates the body, therefore, it helps the brain, the heart and other organs. Being a great purifier, it helps the liver and intestines function properly, improving kidney function, especially preventing the formation of oxalate kidney stones.

It is a good detoxifier of waste substances, toxic metals, etc.

Among its many benefits, chlorophyll also stands out as:
