

## Briomix Ginseng Compost 100 ml

EAN: 8023966100319

FABRICANTE: FORZA VITALE

*Food supplement based on Ginseng and Eleutherococcus, useful for promoting the physiological well-being of the nervous system.*

### DESCRIPTION

Ginseng roots are used in phytotherapy, as they have tonic and stimulating properties. The characteristic components of ginseng are a group of triterpene saponins called ginsenosides, which can be subdivided into two classes based on the structure of their aglycone: derivatives of protopanaxadiol (Rb1, vRb2, Rc, Rd) and protopanaxtriol (Rg1, Re, Rf, Rg2). Ginseng also contains polysaccharides (mainly pectins and glucans) and an essential oil containing sesquiterpene alcohols.

Experimental studies conducted since the 1950s have demonstrated the beneficial properties of ginseng, with different experimental models suitable for assessing the ability of animals to withstand stress. It has been shown that ginseng protects animals from a series of stimuli of diverse nature (physical, chemical and pharmacological); it is also capable of antagonizing the immunosuppression induced by stress.

Ginseng is able to increase the production of corticosteroids by indirect action, through the stimulation of the release of ACTH, on the hypothalamus-pituitary axis. Among the secondary functions, we find effects on the normalization of blood pressure, positive effects on memory, effects on the reduction of glucose and emetic lipid levels, antiplatelet effect, immunostimulant effect, detoxifying effect; in addition to positive effects on the ability to improve erectile function in men. The adaptogenic properties of Eleutherococcus have been widely studied in the former Soviet Union. The most recent studies reported in the international literature have shown pharmacological effects on animals, similar to Panax ginseng (immunostimulant, antiviral, antioxidant, antitumor and hypocholesterolemic effects). Eleutherococcus increases resistance to stress; its effect would involve the stimulation of steroidogenesis, rather than the release of the ACTH hormone. The wild rose is a plant rich in vitamin C, which gives it antioxidant properties.

Echinacea has immunostimulating properties (in the angustifolia variety). Iron-Vitale® - Forza Vitale uses in its specific compounds mixtures obtained by a Spagyric-Alchemic elaboration, from plants characterized by a macrocosmic energetic signature, naturally containing traces of colloidal trace elements, so as to amplify the effect of the product on the specific organ or system concerned.

These naturally obtained food additives act as a support to transport the biochemical principles of the extract and guarantee the energetic stability of the Spagyric product.
