Food supplement based on blueberry, promotes normal and physiological intestinal transit.

DESCRIPTION

Composite carbon is a food supplement based on multiple active ingredients, with the aim of establishing intestinal transit and thus promoting organic regularity.

Blueberry is endowed with chemical substances such as tannins, which play an important role in rebalancing the intestinal flora, making it excellent in cases of diarrhea and digestive disorders. Chamomile, being a sedative and antispasmodic, is indicated for disorders of the gastrointestinal tract or amenorrhea and generic inflammations. Among its hydrophilic components, the flavonoids and glycosylated coumarins stand out, responsible for the spasmolytic action; the lipophilic active principles, on the other hand, are represented by terpenes and azulenes, which have an anti-inflammatory and soothing effect.

Fucus is a seaweed rich in polyphenols, tannins and sterols. Thanks to the large amount of iodine it contains, Fucus is distinguished by its emollient properties. Flax, with its seeds, represents the main source of omega 3 present in nature. It contains molecules such as mucilages, enzymes and chemical substances derived from the splitting of hydrocyanic acid, whose primary purpose is to act as emollients for the faecal mass in formation.

Anise is a herbaceous plant with a carminative and digestive action. It, together with the fennel plant, stimulates the liver glands to increase the secretion of bile. Its seeds, whose primary action is to determine the elimination of intestinal gases with a decrease in the sensation of bloating and at the same time, promote digestion by helping the smooth muscles of the stomach to relax; are classified in the category of hot seeds, therefore suitable for also reducing aerophagia and intestinal spasms.

Valerian, and in particular the valeric and hydrioid agents it contains, inhibit the enzyme responsible for the degradation of a neurotransmitter called GABA, which regulates the excitability of the nervous system as a whole. For this reason, Valerian has antispasmodic activity, even in gastric cramps.

Charcoal has been used for years as an adjuvant in numerous disorders such as aerophagia, colitis and gastritis. Its composition contains small particles that manage to retain excess air that forms in the stomach, reducing the feeling of bloating.

Cardamom is included among the substances with an active carminative and antiseptic action.

Myrrh oil is an essential oil used mainly in cases of severe intestinal irritation accompanied by violent diarrheal attacks; it has a calming, astringent and anti-inflammatory effect.

Cumin is most commonly used in cases of postprandial bloating, when symptoms such as heartburn and digestion difficulties are noted, accompanied by flatulence and belching. Its calming action and regulation of intestinal traffic allows for a rapid improvement in health.

Carbone Composto 25 g

EAN: 8023966200125 FABRICANTE: FORZA VITALE

Ingredients:

Extracts and Powders of: Bilberry (*Vaccinium myrtillus* L.) leaves, microcrystalline cellulose, vegetable magnesium stearate, *Lactobacillus acidophilus* (1.9 billion live bacteria per daily dose), Chamomile (*Matricaria chamomilla* L.) flowers, Fucus (*Fucus vesiculosus* L.) stem, Flax (*Linum usitatissimum* L.) seeds, Fennel (*Foeniculum vulgare* Mill.) fruits, Anise (*Pimpinella anisum* L.) fruits, Valerian (*Valeriana officinalis* L.) rhizome, Cardamom (*Elettaria cardamomum* White et Mason) seeds, Myrrh (*Commiphora molmol* Engl.) resin, charcoal (2%), Cumin (*Cuminum cyminum* L.) seeds, silica.
