

Comprehensive support for your well-being.

DESCRIPTION

This product achieves its effectiveness through the combination of natural substances with proven beneficial properties. Among these is honey, which contains around 3% mineral substances, including zinc, magnesium, phosphorus, iron, potassium and calcium.

Among the vitamins contained in honey, the most notable are vitamin C, vitamins B1, B2 and B6, pantothenic acid, folic acid and some plant pigments such as carotene.

Honey has been widely used since ancient times as a cure-all for health and a remedy for a long list of seasonal disorders. The qualities of Propolis have been extensively studied and confirmed through a multitude of scientific tests that have demonstrated its high antiseptic, anti-infectious, antibacterial and anti-flu properties.

Propolis is considered a natural antibacterial agent for all purposes. This action is the result of the action of the numerous active ingredients it contains: polyphenols, flavonoids, phenol acids, salicylic acid, gallic acid, caffeic acid, alcohols, terpenes and phenolic compounds. Amino acids, trace elements, polysaccharides, B vitamins and provitamin A complete the picture, making propolis one of the most powerful inhibitors of the growth of bacterial strains existing in nature.

Rosa canina, also called wild rose, is a very common plant in nature; rich in vitamin C and contains good amounts of carotenoids, tannins, pectins, vitamin A, B1, B2, B, E, K, P, PP. All these principles make rosehip an effective vasoprotector, as well as a good anti-inflammatory, anti-flu and diuretic.

Acerola fruits, rich in ascorbic acid, malic acid, vitamins A, B1, B2, C and PP, have been used since ancient times for their high concentration of vitamin C, approximately 20 times that contained in citrus fruits.

The abundance of vitamins, but also magnesium, iron and calcium, make acerola a perfect stimulant of the immune system and a good remedy for temporary ailments typical of winter and the change of season. Its high vitamin-enhancing, stimulating, anti-inflammatory and anti-infectious properties make it an ideal natural supplement for convalescence.

The use of Echinacea was a habit established by the American Indians. Echinacea acts on bacteria and viral strains by blocking their development and evolution, increases the response of the immune system by increasing the production of antibodies and white blood cells, and prevents seasonal health problems.

The alkylamides it contains act on microorganisms, while the etheroxylans stimulate the immune system through the release of a substance called interleukin-1. Echinacea angustifolia is, in fact, an excellent ally in the defense against viruses that attack the body.

Ingredients

Ekoprop 200 ml

EAN: 8023966100715 FABRICANTE: FORZA VITALE

Honey, water, hydro-alcoholic extract of Propolis (Propolis) 8%, Wild rose (*Rosa canina* L.) fruits dry extract titrated in vit. C at 70%, Echinacea (*Echinacea angustifolia* DC.) rhizome dry extract titrated in phenols at 4%, Acerola (*Malpighia punicifolia* L.) fruits dry extract titrated in vit. C at 25%, citric acid, potassium sorbate.

Instructions for use

Adults (Recommended dosage for subjects of normal weight) 1 drop 3 times a day. Dilute in water

Up to 12 years (Recommended dosage for subjects of normal weight) Half a drop three times a day. Dilute in water.
