

Psc Ribes Nigrum 15 ml

EAN: 8023966991047

FABRICANTE: FORZA VITALE

Food supplement made from concentrated blackcurrant juice derivatives.

DESCRIPTION

The products of the PSC® - Plant Stem Cells - line are extracts of plant stem cells obtained by macerating embryonic plant tissues in a glycerol-alcohol solution, without adding water. Plant embryonic tissues contain very high amounts of plant hormones that have the ability to interact with our body.

Ribes nigrum is a powerful anti-inflammatory, stimulating the production of natural cortisone for the processing of adrenal function.

Blackcurrant is indicated for maintaining the well-being of the body and for the prevention of infections, rhinopharyngitis, sinusitis, otitis and immune system disorders. The profound effect on the immune system is due to its ability to activate T-Helper cells. Regarding the endocrine system, blackcurrant stimulates the production of endogenous cortisone without the side effects and iatrogenic consequences of synthetic cortisone.

Blackcurrant contains an omega-6 fatty acid called gamma linolenic acid (GLA). Gamma linolenic acid works by increasing the production of prostaglandin E-1 or correcting fatty acid deficiency. Prostaglandin E-1 helps to increase blood flow, decrease platelet aggregation, and reduce inflammation.

Ribes is as rich in gamma-linolenic acid as in alpha-linolenic acid; its extract has been shown to be able to modulate the composition of the lipid membrane and the production of eicosanoids.

Recent studies have also shown that the concentrated form of black currant bud extract is effective as a monoamine oxidase inhibitor (Bormann, et al. 1991).

Ingredients: Alcohol, bio, glycerol, Blackcurrant Bio PSC® (Ribes nigrum L.) 5% buds.
