

Ribes Composto 50 ml

EAN: 8023966200545

FABRICANTE: FORZA VITALE

Food supplement made from blackcurrant, wild rose and white fir.

DESCRIPTION

Blackcurrant yeast derivative has a marked anti-inflammatory, anti-allergic and synergistic action against other yeast therapies with which it is often associated. The use of yeast derivative is indicated in clinical manifestations where it is necessary to stimulate the adrenal cortex, both in allergic manifestations and in general and local inflammatory manifestations, particularly in the locomotor system, but also in the respiratory, digestive and urinary systems.

The anti-inflammatory activity attributed to the yeast derivative is sustained, in addition to the cortisone-like action, also by the flavonoids that oppose the release of prophylactic substances and that, thanks to their vitamin-like action, determine an improvement in microcirculation and therefore in local vascularization.

Wild rose buds are widely used, due to their great effectiveness, in the prevention and treatment of infectious diseases of the respiratory system (nasopharyngitis, otitis, tonsillitis). The use of its buds can help, in such cases, to increase the body's defenses, therefore it is important to start its supply in time, in autumn and continue it in cycles, throughout the winter.

The silver fir is particularly notable for its supporting action on the upper respiratory tract and for its trophic action on the skeletal system; its bud is an excellent remineralizer, which favors mineral balance and calcium fixation in the bones.

Silver Fir buds have an elective organotropism with respect to lymphatic tissue, balancing its functionality and being particularly indicated in recurrent infections of the upper respiratory tract. Gold-Vitale® - Forza Vitale uses in its specific compounds mixtures obtained by a Spagyric-Alchemic elaboration, from plants characterized by a macrocosmic energetic signature, naturally containing traces of colloidal trace elements, so as to amplify the effect of the product on the specific organ or system concerned. These naturally obtained food additives act as a support to transport the biochemical principles of the extract and guarantee the energetic stability of the Spagyric product.

Ingredients: Water, glycerol, alcohol, macerates of: Black currant (*Ribes nigrum* L.) buds 36%, Wild rose (*Rosa canina* L.) buds, White fir (*Abies pectinata* DC.) buds, honey, mixture of natural flavours.
