

## Rubus Composto 50 ml

EAN: 8023966200583

FABRICANTE: FORZA VITALE

*Food supplement made from raspberry, black currant and rowan berry derivatives.*

### DESCRIPTION

Raspberry is a yemoderivative that exhibits selective organotropism with respect to the female genital apparatus and the pituitary-ovarian axis: it is considered, in fact, a remedy for dysendocrinia, both during puberty and menopause. According to Tètau, the presence of a set of muscle relaxant substances (fragarine, etc.) responsible for the antispasmodic action at the uterine level, justify the use of raspberry in dysmenorrhea. Its action is manifested, in a preferential way, in those pains that usually appear at the beginning of menstruation, or during its wake, and that diminish or disappear when the flow is established. As a regulator of ovarian function, it is indicated in the treatment of premature menopause: in fact, it stimulates the ovaries when their function is slowed down in terms of estrogen and progesterin secretion. The blackcurrant yemoderivative has a marked anti-inflammatory, anti-allergic and synergistic action in relation to other yemotherapeutic agents with which it is frequently associated.

The use of this yeast derivative is indicated in clinical manifestations where it is necessary to stimulate the adrenal cortex, such as in allergic manifestations, in inflammatory manifestations, general and local, and in particular those of the locomotor system, but also of the respiratory, digestive and urinary systems. The anti-inflammatory activity attributed to the yeast derivative of blackcurrant is supported, in addition to the cortisone-like action, also by flavonoids that oppose the release of prophylactic substances and that, thanks to the vitamin-like action, determine an improvement of the microcirculation, and consequently of the local vascularization.

The Rowan is indicated as a recommended remedy for women in menopause and climacteric, since it contributes to attenuating circulatory symptoms such as headaches, hot flashes and hypertension characterized in particular by increased blood pressure. The Fig has an anxiolytic action and it is important to use it whenever a clear neurotic component (stress-anxiety) is detected at the base of the functional disorder: in fact, it can be considered the remedy for psychosomatic manifestations.

**Ingredients:** Water, alcohol, glycerol, macerates of: Raspberry (*Rubus idaeus* L.) young shoots 40%, Blackcurrant (*Ribes nigrum* L.) buds, Rowan (*Sorbus domestica* L.) buds, Fig (*Ficus carica* L.) buds, honey, mixture of natural flavours.
