

*Malva Food Supplement, promotes the fluidity of bronchial secretions.*

### DESCRIPTION

In folk medicine, mallow is very well known. Our grandmothers knew its value and also used it externally against whitlow, boils, pus foci and easily inflamed wounds, and also against eczema.

As known active substances, it has mucilages, which upon hydrolysis produce galacturonic acid, galactose, glucose and a methyl pentose, small amounts of tannins, an anthocyanin pigment (Malvina), caffeic acid and chlorogenic acid.

Mallow has emollient, anti-inflammatory and slightly laxative properties.

Mallow forms a protective layer on irritated and inflamed mucous membranes, as well as along the respiratory tract, acting against diseases that cause cooling of the first respiratory tract.

**Ingredients:** Water, alcohol, Mallow (*Malva sylvestris* L.) leaves and flowers 20%, honey.
