

*Blueberry Food Supplement, promotes regular intestinal transit.*

### DESCRIPTION

Blueberry has hypoglycemic, tonic and astringent properties, antidiarrheal (due to tannins), protective of the vascular lining of arteries and veins, especially at the microcirculation level, decreasing capillary permeability and reducing platelet aggregability (this property is due to anthocyanin pigments). The anthocyanosides it contains have the ability to regenerate retinal purple, which is why it is useful in eye pathologies.

Rebalancing of intestinal bacterial flora. Pancreatic drainer.

The active substances contained in the plant are not harmful and are suitable for treating children's diarrhea. The plant also contains flavones, a glucoside, tannins, fatty acids, vitamin C, A, and pectins. The leaves and fruits are used. It can be useful as an adjuvant in: diabetes, asthenia, colibacillosis, enteritis, dysentery, colonopathy due to fermentation and/or putrefaction, visual difficulty in the dark, retinopathies, skin edema, intestinal dysmicrobia, peripheral and cerebral vasculopathies, abdominal dilatations.

**Ingredients:** Water, alcohol, Blueberry (*Vaccinium myrtillus* L.) leaves 20%, honey.
