

Cartishark 865 mg 300 capsules

EAN: 8437011373120 FABRICANTE: JELLYBELL

Cartishark by Jellybell is a food supplement based on pure shark cartilage that keeps joints in normal condition.

DESCRIPTION

Shark Cartilage is very rich in glycosaminoglycans (GAGs) or mucopolysaccharides, macromolecules found in all our joints, blood vessels and organs.

These compounds are responsible for maintaining appropriate water levels in the cartilage matrix, thus helping the cartilage to maintain its gelatinous nature, which is essential for protecting the joints. Optimal levels of GAGs protect the cartilage and in turn the joints.

Sharks are known for their strong immune system, they are resistant to cancer even when exposed to potent cancer-causing chemicals. One agent that may be responsible for this incredible immunity that sharks possess is the presence in shark cartilage of an anti-angiogenesis substance that inhibits the growth of blood vessels in solid tumors, preventing the development of tumors.

Amount provided per daily dose (6 capsules): 4,440 mg Shark Cartilage (rich in mucopolysaccharides 20%).

Shark Cartilage

It is the material that makes up the skeleton of the shark and its fins; it is rich in calcium, phosphorus, proteins and complex carbohydrates, and its content of the mucopolysaccharide chondroitin sulfate stands out, which facilitates the regeneration of damaged cartilaginous tissue.

MUCOPolysaccharides

They are long-chain sugar molecules found throughout our body, often in mucus and in the fluid around the joints. They are commonly called glycosaminoglycans.

Instructions for use:

Take two capsules with a glass of water (200 ml) at breakfast, lunch and dinner.
