

## Lactisol 29.8 Salbe Ointment 50 g

EAN: PZN-5027268

FABRICANTE: JELLYBELL

*Lactisol salbe from Galactopharm, ointment for the protection and care of very flaky and dry skin.*

### DESCRIPTION

#### Properties and benefits of Lactisol Salbe

For severe keratinisation and cracks, for cracked and wrinkled skin, for itching and tension, with valuable lanolin and sunflower oil, with the skin's own lactic acid from a special fresh sour serum concentrate with selected natural raw materials. High re-fatting. Pleasant feel with high-quality water-in-oil emulsion. The model for the development of this effective skin ointment is the traditional quark wrap, which has proven to be irritating and flammable for decades. BHT-free lanolin. No dyes. No perfume. No preservatives.

#### Ingredients:

- Sour whey concentrate (max. 10% L (+) lactic acid): Lactic acid is produced as an organic acid in the human intestine by the fermentation of milk sugar (lactose) by anaerobic lactic acid bacteria (e.g. Lactobacillus lactis). It is responsible for the development and maintenance of a physiological intestinal flora. In addition, lactic acid is the last step of the so-called glycolysis in the animal and human organism: pyruvic acid converts lactate into lactate (lactic acid) via lactate dehydrogenase. Sour whey has a first and very important property in building and maintaining the pH of the mucous membranes. It also has cleansing and detoxifying benefits, eliminating toxins in a completely natural way. It prevents constipation due to its prebiotic action and helps maintain an optimal intestinal flora.
- Lanolin:

It is used in cosmetics as an excipient due to its easy absorption through the skin. It is considered a powerful moisturizer and emollient.

•

Sunflower oil: Sunflower oil is extracted from sunflower seeds and is one of the healthiest oils for consumption due to its nutritional value. Due to its emollient properties, it is a very important raw material in the cosmetics industry. Its main element is linoleic acid. Linoleic acid is an essential polyunsaturated fatty acid rich in Omega-6. Other important components are leic acid, Omega-9 and palmitic acid, which is the main saturated fatty acid that humans have. Other important components of sunflower oil are: Carotenoids, tocopherols and vitamins A, D and E. All these

Prices valid except for changes on our website. (IVA/VAT) included. Doc. Version bf-trf-G-20241222
