Iron and phosphorus compounds act on haemopoiesis or erythropoiesis. They promote the formation of new cells in the blood, especially erythrocytes. They also intervene in the proteins responsible for storing iron in the liver (ferritin), spleen and bone marrow (haemosiderin).

DESCRIPTION

Iron and phosphorus compounds act on haemopoiesis or erythropoiesis. They promote the formation of new cells in the blood, especially erythrocytes. They also intervene in the proteins responsible for storing iron in the liver (ferritin), spleen and bone marrow (haemosiderin).

Phosphorus acts on the nervous system through neurotransmitters. It is involved in oxygen fixation through Fe.

It acts on the immune system, thanks to the Fe stored in the intestinal mucosa, increasing physical and mental resistance.

It acts on the intestine, regulating Fe activity, preventing the relaxation of the intestinal villi, a factor that causes diarrhea or constipation, if the affected tissues are the muscular walls of the intestines. Together with some vitamins, they perform antioxidant functions in chronic diseases or old age (premature or senile).

It indirectly affects all cells, tissues, lymphatic and blood vessels in our body, as well as the formation of proteins, enzymes and neurotransmitters. It slows down the deterioration of the tissue of the circular muscle fibers of the blood vessels, preventing relaxation and subsequent venous stasis that would cause the first stage of inflammation of the tissues and organs.

Iron deficiency anemia due to blood loss from wounds, menstruation, or lack of assimilation. Hypochromic anemias (hyposideremia, sideroacrestic, thalassemia).

All types of inflammation: rheumatic, traumatic... In all types of fevers (especially up to 38.5 degrees Celsius).

Immune system disorders (autoimmunity): allergies, psoriasis, arthritis and colds or flu (flu).

Intestinal disorders (as a regulator of diarrhea and constipation). Acts as a nerve tonic.

Fickle appetites.

Promotes transparency of the lens.

The patient IMPROVES with COLD and rest.

It gets WORSE with movement.

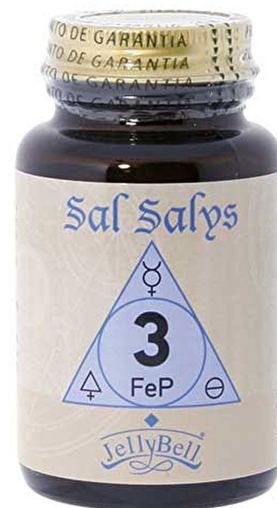

He doesn't like eggs.

Acute inflammations.- Antipyretic.- Flu.- Anemias.- Rheumatism.- Arthritis.- Related to the strength of

Jupiter.

Composition:

In addition to the mineral salts used as ingredients, rice protein has also been used, which provides important nutritional value and helps the body to better absorb and assimilate the salts.

Instructions for use:

Chew and dissolve 1 tablet in the mouth, 3 times a day (breakfast, lunch and dinner). Excessive consumption may have laxative effects.
