

Calasorb® 180 Tablets

EAN: 5055148411732 FABRICANTE: LAMBERTS

Calasorb Lamberts Helps reduce bone demineralization.

DESCRIPTION

Calcium supplements provide a convenient way to increase calcium intake and have been shown to help slow the inevitable loss of bone mass that occurs with age. Calcium contributes to normal blood clotting, energy metabolism and normal cell division and differentiation. It also supports the normal functioning of neurotransmission, digestive enzymes and muscles.

Calcium contributes to reducing bone demineralization in postmenopausal women. Low bone mineral density is a risk factor for osteoporotic bone fractures. This benefit is achieved with a daily dose of at least 1200 mg in women aged 50 years or older.

CalAsorb® from LAMBERTS® provides calcium in the form of citrate, which is considered one of the most easily absorbable calcium compounds, due in part to its high solubility compared to other calcium compounds. Three tablets provide a total of 800 mg of calcium, which is the recommended daily amount of this mineral.

Oval tablet with whitish coating.

Three tablets provide:

Vitamin D (D3)	6 µg
Calcium (as Citrate)	800 mg

Allergen note

The following list of allergens are excluded: wheat, gluten, barley, soya, eggs, milk and dairy products, lactose, nuts, sulphites, celery, fish, shellfish and yeast.

Precautions

None known at the recommended dose.

Prices valid except for changes on our website. (IVA/VAT) included. Doc. Version bf-trf-G-20241120
