

Colladeen Derma Plus 60 Capsules

EAN: 5055148407001 **FABRICANTE:** LAMBERTS

Colladeen Derma Plus Lamberts, protects and repairs collagen. With Vitamin C.

DESCRIPTION

Collagen is the most abundant protein in the body and forms the connective fibers in tissues such as skin, ligaments, cartilage, muscles, and capillaries. When collagen is damaged (by free radicals, sunlight, etc.), tissues can lose their strength and elasticity.

Collagen status is highly dependent on the nutrients present in the diet, and research indicates that anthocyanins play an active role in protecting the body's collagen. For this reason, an anthocyanidin level is used that reflects this research.

LAMBERTS® Colladeen® Maximum Strength is one of the most concentrated sources of anthocyanidins on the market, providing 160 mg of these (from grape seed and blueberry extracts) per tablet. It is recommended by 70% of professionals, making it a best-selling product.

Anthocyanidins (and proanthocyanidins) are a group of natural plant compounds found in dark-skinned fruits. They are the natural pigments responsible for the blue and red colors of fruits and berries. Anthocyanidins have been the subject of considerable scientific research, which confirms that these compounds are important components of a healthy diet. Plants provide endless phytochemical compounds, many of which are still completely unknown. They are recommended for intake and efficacy in the form of high-quality, high-potency standardized extracts.

The term "anthocyanin" was first proposed in 1835 by the German pharmacist Ludwig Clamor Marquart (1804-1881) to describe the blue pigment of red cabbage (*Brassica oleracea*). In fact, anthocyanins include not only the blue pigments of plants, but also the red and violet ones.

This product contains naturally occurring anthocyanidins (extracted from grape seeds and blueberries). Anthocyanidins are safe natural flavonoids as they are not known to interact with medications.

Round tablet with pink coating.

Each tablet provides:

Anthocyanidins	160 mg
