

Phosphatidyl Serine with Zinc 60 Capsules

EAN: 5055148408534 FABRICANTE: LAMBERTS

Phosphatidyl Serine 100 mg from non-genetically modified soy. With Zinc that contributes to normal cognitive function.

DESCRIPTION

Phosphatidyl Serine 100 mg from LAMBERTS® provides pure phosphatidyl serine of the highest quality obtained from NON-GMO soybeans. Phosphatidyl serine is a phospholipid found in high concentrations in the brain and neuronal membranes, delicate structures involved in neurotransmission.

Phosphatidyl Serine is not an essential nutrient as it can be produced in the body. However, with age, the body's synthesis may decrease. PH is often described as one of the building blocks of brain cell membranes. Studies to date have been largely positive and have shown it to be safe for long-term use. Unfortunately, modern diets, especially low-fat or vegan diets, can deprive the body of sufficient levels of Phosphatidyl Serine. It is believed that consumption must have fallen on average from 250 mg to 100-180 mg daily.

Zinc has also been included in the formula as it has been observed that it may contribute to normal cognitive function. Research has shown that the adult population suffers from the highest levels of cognitive decline, particularly in memory. This product is recommended for adults of any age who are looking for a supplement to help maintain normal cognitive function. Studies to date have been largely positive and have shown it to be safe for long-term use. It is the perfect partner for Refreshall®.

Any extraordinary physical or mental effort of the body can increase zinc needs or cause additional zinc losses, while foods rich in phytates and fibre inhibit the absorption of zinc present in food. One fifth of the zinc present in the body is found in the skin.

Like the rest of our range, the formulations for these products are the result of a deep understanding of the latest nutritional research and are supported by a scientific basis. Most importantly of all, they are also correctly potentiated, as dosage is the key to success when using nutrition in clinical practice.

LAMBERTS® Phosphatidyl Serine is manufactured in the UK under strict GMP manufacturing standards and the small tablets are coated to make them tasteless and easy to swallow.

Oval yellow coated tablet.

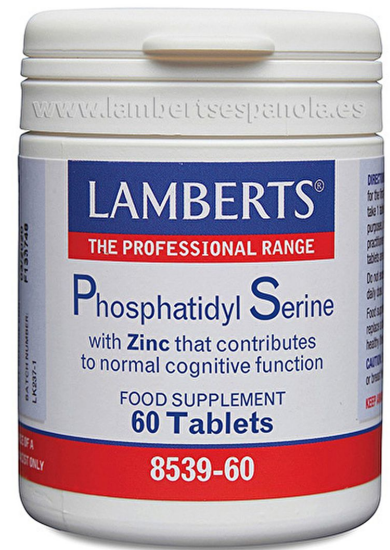

Each tablet provides:

Prices valid except for changes on our website. (IVA/VAT) included. Doc. Version bf-trf-G-20241124
