

Vitamin C with Bioflavonoids 180 Tabs

EAN: 5055148400712

FABRICANTE: LAMBERTS

With Bioflavonoids and Rosehip. Protects cells from oxidative damage.

DESCRIPTION

This vitamin is water-soluble and since humans are unable to produce it, it is necessary to ingest it daily.

Vitamin C is important because:

- It contributes to the normal functioning of the immune system and nervous system.
- It contributes to the normal formation of collagen for the normal functioning of blood vessels, cartilage, bones, gums, teeth and skin.
- It promotes energy metabolism and improves iron absorption.
- It contributes to normal psychological function and to the protection of cells from oxidative damage.
- It helps reduce tiredness and fatigue, and regenerates the reduced form of vitamin E.

LAMBERTS® Vitamin C 1000mg tablets provide adequate levels of vitamin C for those who have a dietary deficiency of this nutrient. These tablets also contain a relevant level of bioflavonoids, known to facilitate the absorption of vitamin C and have specific effects on strengthening capillary vessels. These bioflavonoids include rutin, quercetin, citrin and hesperidin.

For optimal results, vitamin C should be taken in small amounts throughout the day and night, as it is rapidly eliminated from the body. However, this is not always possible, which is why we have formulated sustained-release vitamin C tablets.

These tablets are produced through a special process, which retains the nutrient in spherical microcapsules, allowing for a slow release of the same once ingested. This means that the absorption of vitamin C is a continuous process, as the release is gradual, over 6-8 hours.

Sustained Release Formula.

Oval tablet with clear coating with beige speckles.

Each tablet provides:

Vitamin C with Bioflavonoids 180 Tabs

EAN: 5055148400712

FABRICANTE: LAMBERTS
