GF Regenhial Concentrate is an intensive revitalizing and regenerating concentrate of growth factors of biotechnological origin.

DESCRIPTION

What is GF Regenhial Concentrate from Lavigor used for?

GF Regenhial Concentrate from Lavigor is a concentrate for professional use especially indicated to effectively treat the manifestations of skin aging caused by lack of cell stimulation and activation, such as lack of firmness and elasticity, dull and lifeless skin, wrinkles, sagging, flaccidity, low density skin and stretch marks. GF Regenhial Concentrate by Lavigor has an ideal formulation to be applied with micro-needling devices, such as Dermapunt and Dermastick, and specific aesthetic medical techniques to introduce active ingredients, as well as in chemical peeling treatments, favoring the renewing and regenerating effect.

What is the composition of GF Regenhial Concentrate from Lavigor?

GF Regenhial Concentrate from Lavigor is made up of growth factors: cell stimulators and activators, regenerators and repairers, hyaluronic acid: moisturizing and redensifying, and fermented folic acid, which stimulates cell regeneration.

How is GF Regenhial Concentrate de lavigor used?

GF Regenhial Concentrate by Lavigor must be applied evenly and favor its absorption. Applied with Dermapunt or Dermastick, spread evenly over the skin immediately before applying the microneedling device. Applied in chemical peeling treatments, spread evenly after the neutralization phase.

As a product for home use, apply twice a day, prior to the daily care anti-aging treatment.
