DESCRIPTION

What is Laviderm Melanoblock SPF50+ and what is it used for?

Melanoblock SPF50+ from Laviderm is a depigmenting and sunscreen face cream. Laviderm Melanoblock SPF50+ is indicated to eliminate, correct and prevent skin blemishes caused by hyperpigmentation, providing a smoother and more uniform skin tone. Laviderm Melanoblock SPF50+ is suitable for all skin types.

What composition does Laviderm Melanoblock SPF50+ have?

Laviderm Melanoblock SPF50+ contains:

- Depigmenting peptide: acetyl glycy beta-alanine: MITF gene inhibitor.
- Physical, chemical and biological sunscreens.
- Arbutin: tyrosinase deactivator.
- Liquorice extract: antioxidant and tyrosinase oxidation inhibitor.
- Bioavailable zinc: Tyrosinase blocker
- Vitamin B3: malenin transport and transfer inhibitor.
- Chlorella bioferment and white elupine proteins: Optimizer of melanin distribution.
- Vitamins A, C and E: renewing, lightening, antioxidant and biological sunscreen.
- Green tea: Antioxidant.
- Shea butter: Emollient and natural sunscreen.

How is Laviderm Melanoblock SPF50+ used?

Melanoblock SPF50+ from Laviderm is applied globally, daily and generously, on the area to be treated. Repeat the application every two hours against prolonged exposure to the sun. For maximum effectiveness, combine with Laviderm Melanoblock peeling pack and carry out the complete treatment for a minimum period of two months.
