

*Regenhial oral gel is a concentrated gel of pure hyaluronic acid (sodium salt) 250mg/g, with high viscosity. Regenhial oral gel is used to treat mouth sores.*

### DESCRIPTION

Regenhial oral gel is a pure hyaluronic acid gel, which is moisturizing, repairing and soothing.

Regenhial oral gel is especially indicated to improve the conditions of the oral cavity.

### What is the composition of Regenhial oral gel?

The composition of Regenhial oral gel are:

- Pure hyaluronic acid: moisturizing, repairing, soothing.
- Polyvinylpyrrolidone: protector, soothing and optimizer of the distribution of the rest of the active ingredients.
- Propolis: balsamic.
- Hamamelis water: soothing.

### How is Regenhial oral gel used?

Regenhial oral gel should be applied three times a day or as needed. Do not ingest any solid or liquid substance for at least one hour after application. Fill the measuring cup with 10ml of water, top it off with another 10ml of Regenhial oral gel, pour into a larger glass and mix until a homogeneous solution is obtained. Immediately rinse mouth, gargle and keep in mouth for one to two minutes, ensuring complete coverage. Do not ingest, spit out solution and discard unused prepared amount. It can also be used undiluted, if water is not available or if you want to enhance the action of the product. In localized areas, it can be applied with the help of a stick.
