

## Monofloral Manuka Honey MGO 400+ 500 g

EAN: 9421905812092    FABRICANTE: MANUKA WORLD

*Manuka honey is known for its antibacterial, anti-inflammatory, anti-infective, and antioxidant properties, and has been shown to contain natural antibiotics that can destroy mutant bacteria, including staph infections. It also has anti-inflammatory properties, which helps reduce pain associated with wounds and increases blood circulation.*

### DESCRIPTION

#### What is Manuka honey and what is it for?

New Zealand Manuka honey is highly valued around the world for its exceptional properties that help maintain digestive health. It comes from the native New Zealand plant called *Leptospermum Scoparium*, which grows wild in regions with mild and oceanic climates. This honey is produced only at certain times of the year and is collected by specialist beekeepers in southern New Zealand.

Manuka Monofloral MGO honey is a pure, raw and unaltered honey that has not been filtered or pasteurized, and contains the active substance Methylglyoxal (MGO), which is responsible for its antibacterial properties. Unlike the hydrogen peroxide found in ordinary honey, MGO is not neutralized in the intestinal tract, making it effective in fighting bacteria without affecting bacteria essential for digestion.

Manuka honey has historically been used in folk medicine, and Manuka compresses were used by New Zealand Maori to treat burns, infections, insect bites and warrior wounds.

#### What does MGO 400+ mean?

New Zealand Manuka Honey Monofloral MGO 400+ is a honey with a high Methylglyoxal (MGO) content of 400 mg/kg, making it an effective option for treating various conditions. For example, it can be applied externally to treat burns, wounds, bedsores, and other similar conditions. It can also be consumed internally to relieve cough, gastroenteritis, bronchitis, tonsillitis, mouth ulcers, stomach and duodenal ulcers, among other conditions. Manuka honey has historically been used by Maori in New Zealand to treat a variety of conditions, and its high MGO content has now been scientifically proven to give it unique antibacterial, anti-inflammatory, and antioxidant properties, making it especially beneficial for digestive health and general.

#### What is the composition of Manuka honey?
