

Age Splendor Hair with Catalase Cannablock

EAN: 8435110850863 FABRICANTE: NATURLIDER

Capillary Age Splendor with catalase from Naturlider, is the best food supplement to avoid gray hair. Age Splendor Capillary contains the enzyme catalase in its composition, which is responsible for the normal pigmentation of the hair.

DESCRIPTION

Age Splendor Capilar with catalase from Naturlider, prevents the appearance of the dreaded **gray hair**. Age Splendor capillary contains the enzyme catalase in its composition, which is responsible for normal hair pigmentation. The possible causes of the appearance of gray hair are natural aging, stress, vitamin deficiency, tobacco, and also genetic factors.

Copper is present in the body in 100 to 150 mg and 90% of this amount is found in muscles, bones and liver. Copper participates in the formation of hemoglobin and is essential for the development and maintenance of bones, tendons, connective tissue and the vascular system. Among the functions of copper is the formation of melanin, which is a pigment formed in cells called melanocytes that is very important in the pigmentation of hair, skin and eyes.

Zinc is an essential mineral for our body, more than 85% of the total zinc present in our body is deposited in the muscles, bones, testicles, hair, nails and pigmented tissues of the eye.

The enzyme catalase is so crucial to our health that it is found in almost every living organism on the planet that is exposed to oxygen. This antioxidant enzyme can catalyze the conversion of hydroxide peroxide into water and oxygen. Hydrogen peroxide is a byproduct of cellular metabolism that supports some useful functions including a healthy immune response.

Gray hair is hair that has turned white or gray due to a loss of pigmentation. This hair discoloration is specifically due to a decrease in melanin, which determines hair color, among other things.

The main cause of the appearance of gray hair is natural aging, and they are caused by large amounts of hydrogen peroxide that accumulates in the hair follicles, discoloring the hair and preventing the melanin that produces the color of the synthesized pigments.

It also contains biotin and zinc that contribute to the maintenance of hair in normal conditions, and copper that contributes to normal hair pigmentation.

What is the composition of Age Splendor Capilar with catalase?

Catalase powder	400 mg/capsule	(Per 3 Capsules)
Para-Aminobenzoic Acid	200 mg/capsule	

Prices valid except for changes on our website. (IVA/VAT) included. Doc. Version bf-trf-G-20241117
