What are the properties of Naturlider hydroalcoholic gel?

ALOE HAND PROTECTIVE NATURLIDER HYDROALCOHOLIC GEL 500 ml

EAN: 8435110851532 FABRICANTE: NATURLIDER

The properties of Naturlider hydroalcoholic gel are several:

Ethyl alcohol (contains 70% by volume) is a disinfectant and antiseptic for topical use. It also has bactericidal action against bacteria, fungi and viruses with lipid cover.

Benzalkonium chloride is a disinfectant, bactericide and inhibitor of viral activity. It is used as an antiseptic for the skin, mucous membranes and wounds. It is bacteriostatic at low doses and bactericidal at high doses against Gram + bacteria.

Aloe vera extract hydrates and softens the skin, acting as an excellent cell regenerator. Due to its high penetration it is a powerful healing agent. Removes dead skin cells and promotes tissue health.

And glycerin has emollient and hygroscopic properties. In other words, it absorbs moisture from the environment, transmitting it to the skin, so it softens, hydrates and protects it.

How should Naturlider hydroalcoholic gel be used?

A small amount should be applied to dry, healthy hands and spread by rubbing for at least 30 seconds until complete drying. Incise the space between the fingers, the back of the hands and under the nails. Do not clarify.

What precautions should be taken with Naturlider hydroalcoholic gel?

Contact with the eyes should be avoided, contact with mucous membranes and sensitive areas of the skin should be avoided, it should not be applied to irritated areas or open wounds. It should be kept out of the reach of children.
