

PROBIOTICSLIDER NATURLIDER 30 Vcaps

EAN: 8435110851785 FABRICANTE: NATURLIDER

Probioticslider Naturlider are symbiotic preparations, that is, a mixture of probiotics and prebiotics, so they are excellent when taking antibiotics, or simply to regulate the intestinal flora.

DESCRIPTION

Probioticslídler Naturlider, are a food supplement recognized as a symbiotic preparation. Symbiosis is defined as the mixture of **probiotics and prebiotics**.

Prebiotics have the same purpose as probiotics, although they use different mechanisms of action. Lactobacilli and bifidobacteria are the main genera on which probiotics can affect. Compared with lactobacilli, bifidobacteria are more likely to benefit, probably because bifidobacteria reside in greater numbers in the human colon than lactobacilli and have a greater preference for oligosaccharides. Precisely in probioticslider, the Bifidobacterium genus is represented with three species, so the prebiotic contribution in the form of inulin is highly consistent. non-digestible carbohydrates and lignin present in foods of plant origin, or functional fiber, consisting of isolated, non-digestible carbohydrates that have beneficial effects in humans. Inulin can be considered a type of functional fiber or prebiotic. In fact, all prebiotics are fiber, but not all fiber is prebiotic. For a food supplement to be considered a prebiotic, it requires sufficient scientific evidence to demonstrate that:

It resists gastric acidity, hydrolysis by mammalian enzymes and is not absorbed in the upper gastrointestinal tract.

It is fermented by the intestinal microflora.

It selectively stimulates the growth and/or activity of intestinal bacteria potentially associated with well-being.

The potential benefits of prebiotics are substantially more limited than the benefits derived from the consumption of dietary fiber. It also contains vitamin D that contributes to the normal functioning of the immune system.
