DESCRIPTION

What is tribulus and Maca Naturmil?

It is a sexual revitalizing food supplement, for erectile dysfunction, it is aphrodisiac and increases vitality.

What is Tribulus and Maca from Naturmil used for?

The Tribulus+maca supplement has been shown to be beneficial in addressing erectile dysfunction and improving male sexual function. This combination of ingredients helps to promote vasodilation, which means that it dilates the blood vessels, thus allowing more blood flow to the corpora cavernosa of the male genital organ. As a result, an improvement in the quality of the erection can be achieved.

In addition to its effects on sexual function, Tribulus+maca can also increase the production of testosterone, a crucial hormone for normal sexual function. This can be beneficial both for treating sexual dysfunction and for improving physical performance, for example for athletes who want to maintain top performance.

It is important to note that although this supplement may be useful in treating erectile dysfunction and improving physical performance, it is advisable to consult a health professional before beginning any type of supplementation. A doctor will be able to assess your specific situation and provide you with personalized and safe recommendations.
