

NUADHA 500 mg LEMON 30 Chewable Caps

EAN: 8437009953211 FABRICANTE: NUA

EL NUADHA is a food supplement from NUA laboratories, which contains a high concentration of DHA (docosahexaenoic acid), a marine omega-3 fatty acid present mainly in oily fish (in this case, anchovy) that provides a minimum of 500 mg of pure DHA per pearl. This format is an ideal lemon chew for children or adults who do not know or have difficulty swallowing.

DESCRIPTION

What is NUADHA from NUA laboratories?

NuaDHA 500 is a DHA concentrate where any other type of fats are practically absent (e.g. palmitic acid, myristic acid, phytanic acid, etc.).

What is NUADHA from NUA laboratories for?

NUADHA Serves to maintain normal cardiac function, to maintain good vision, for memory and concentration, and for proper functioning of sperm.

What uses does NUADHA have from NUA laboratories?

NUADHA is used on a cognitive level, both for children and older people, since DHA contributes to the normal functioning of the brain. It is also used to maintain good vision, or in case of visual deterioration. At the cardiac level it contributes to the normal functioning of the cardiovascular system. And it is effective in the case of male fertility problems.

NuaDHA®500 is a high concentrate of docosahexaenoic acid (DHA), a type of omega-3 fatty acid found mainly in oily fish, specifically anchovy. Each NuaDHA®500 bead provides a minimum of 500 mg of pure DHA. This product comes in the form of lemon-flavored chewables, making it ideal for both children and adults who have difficulty swallowing pills.

DHA is essential in our diet, and obtaining it mainly through the consumption of oily fish is practically the only source in many industrialized societies. In these societies, it is common to find significant deficiencies of this nutrient in people of all ages, from children to adults.

DHA is found in all cells in our body and is part of the cell membrane that surrounds each of them. However, it especially focuses on three key areas of the body: the brain, the retina and the sperm. DHA plays an important role in several functions:

NUADHA 500 mg LEMON 30 Chewable Caps

EAN: 8437009953211 FABRICANTE: NUA

- On a cognitive level, maintaining adequate levels of DHA is crucial for both normal brain development in children and brain function in adults.
- Regarding visual health, DHA contributes to visual development in children and the maintenance of normal vision, being particularly important in cases of age-related visual deterioration.
- Additionally, DHA has cardiovascular health benefits by contributing to normal heart function.
- Finally, DHA is an essential fatty acid for maintaining optimal sperm integrity.

What benefits does NUADHA from NUA laboratories have?

DHA is present in each and every one of the cells in our body, forming part of the cell membrane that delimits their contour, and its benefits are noted in the brain, retina and sperm.

How do you take NUADHA from NUA laboratories?

NUADHA is taken orally: 1 chewable capsule daily with meals. It is lemon flavor.

What is the composition of NUADHA from NUA laboratories?

The composition of NUADHA is: purified fish oil, antioxidants (natural mixed tocopherols). Pearl composition: shell (gelatin, glycerin), gelling agent (corn starch) and sweetener (sucralose), Omega 3 contains 550 mg per pearl, DHA 500 mg per pearl, and natural vitamin E 2.1 mg per pearl.
