

*Samento is an extract from the bark of *Uncaria tomentosa* popularly known as Cat's Claw and contains only the pentacyclic form of the active ingredient*

### DESCRIPTION

This fact differentiates it from other cat claws on the market since, thanks to this particularity, Samento can help regulate the immune system, in addition to being a powerful anti-inflammatory and antioxidant.

### Uncaria Tomentosa, pentacyclic active ingredient

Samento is known for its immunomodulatory properties, as it stimulates the production of white blood cells which intervene in the fight against pathogens that cause infections. It has been described as having analgesic properties, which is why it can promote bone health by improving the symptoms of diseases such as osteoarthritis.

*Uncaria Tomentosa* is credited with effects on the immune system, inflammatory processes and antimicrobial properties.

The particularity of NutraMedix Samento is that it contains only the pentacyclic form of active ingredient, which makes it able to help the homeostasis of the immune system.
