Is Nocisens Intense safe?

- It is safe and well tolerated by all skin types.
- It is not a phototoxic product.
- It is hypoallergenic.
- Significantly increases skin hydration.
- Improves the skin's barrier function by reducing transepidermal water loss.

What precautions should I take with Nocisens Intense?

It is for external use. If it comes into contact with eyes, wash with plenty of clean water. Do not eat.

The Nocisens[®] product line has a careful composition that is respectful of the most sensitive skin. Its innovative formulation contains:

- Hydroxymethoxyiodobenzyl glycolamide pelargonate is a novel neurodermatological ingredient that acts at the sensory receptors of the epidermis, relieving uncomfortable sensations caused by dryness and dermal sensitivity. Furthermore, its continued use allows the epidermal barrier to be restored, preventing water loss and strengthening the skin's natural defense. It is the result of several years of scientific research¹⁻³ by the Sensory Neurobiology group of the Institute for Research, Development and Innovation in Health Biotechnology of the Miguel Hernández University of Elche.
- Combination of fatty acids with a powerful moisturizing action that provide a soft texture and favor the action of the cream in the deepest layers of the epidermis.
- Antioxidant molecules, such as tocopherol, that prevent the main components of the skin from oxidizing and deteriorating as a result of daily aggressions.

Nocisens[®] INTENSE has twice the active concentration of Nocisens[®] OIL, so its action is more powerful.

Nocisens[®] INTENSE is indicated for children from 3 years of age.

You can use Nocisens[®] INTENSE at the same time as other topical products or drugs such as corticosteroids or antibiotics.

FABRICANTE: PROSPERA BIOTECH

You can apply Nocisens® INTENSE to dry or sensitive areas all over the body, including the face.

You must avoid it coming into contact with mucous membranes or open wounds. For very delicate areas such as the eyelid, you can use a cotton ball to remove excess product.

Nocisens® INTENSE is very effective in combating dryness and itching. If you suffer from any of these two conditions, Nocisens® INTENSE can be of great help.

However, Nocisens® INTENSE has a concentrated and very hydrating texture that may not be well tolerated by oily skin.

Studies carried out by independent companies have shown that the products of the Nocisens® line are well tolerated by all skin types, including the most sensitive in children: ^{1,2}

- 100% of users stated that Nocisens® leaves their skin softer and calmer.
- 95% of users think that Nocisens® hydrates and nourishes the skin.
- 85% of users found their skin more flexible and elastic after using Nocisens®.
- 85% of users felt comfort after using Nocisens®.

Our recommendation is that you use Nocisens® INTENSE for the most sensitive areas or areas with breakouts and Nocisens® OIL for the maintenance of your skin.
