

Oncapsisens 30ml

EAN: 8437020862042 FABRICANTE: PROSPERA BIOTECH

Oncapsisens is a cream that is used for the treatment of dry, deteriorated, hypersensitive skin due to cancer chemotherapy treatment. Oncapsisens restores the balance of the neurosensory system and therefore relieves the discomfort of dry, damaged and hypersensitive skin.

DESCRIPTION

What is Oncapsisens and what is it for?

Oncapsisens from Prospera biotech laboratories is a highly concentrated moisturizing cream. Oncapsisens is used to care for and relieve the discomfort of sensitive skin and sensory discomfort due to treatment with **chemotherapy** or oncological treatments.

Oncapsisens reduces and prevents the abrasive pain, heat, tingling and even the stinging sensation in the feet and hands caused by the toxicity of the drugs used in chemotherapy.

Oncological treatments can cause skin side effects such as dryness, deteriorated appearance and hypersensitivity. Oncapsisens, with its high concentration of neurocosmetic ingredients, restores balance to the neurosensory system, helping to reduce uncomfortable sensations.

Oncapsisens[®] is a concentrated and highly moisturizing cream that contains:

- A neurodermatological ingredient synthesized from a natural compound that acts at the level of the skin's sensory receptors to relieve uncomfortable sensations in sensitive skin. It is the result of several years of scientific research¹⁻³ by the Sensory Neurobiology group of the Institute for Research, Development and Innovation in Health Biotechnology of the Miguel Hernández University of Elche.
- Sunflower oil, an emollient extract rich in vitamins E, A, D and C that helps regenerate the damaged skin barrier, providing great hydration to the skin.
- Vitamin E, whose high antioxidant power prevents oxidative damage and helps soothe sensitive skin.

In which cases is Oncapsisens cream indicated?

Oncapsisens is indicated when due to oncological treatment there is dryness in the skin, the skin has a

deteriorated appearance or is very sensitive.

If you suffer from dryness, deteriorated appearance and/or hypersensitivity in your skin due to chemotherapy treatment.

Oncapsisens[®] helps strengthen the balance of the skin and calm the typical discomfort of skin undergoing cancer treatment. Thanks to its innovative mechanism of action, it strengthens the skin barrier and restores sensory balance.

What is the composition of Oncapsisens?

The composition of Oncapsisens is:

- HMGP is a novel neurocosmetic ingredient synthesized from a natural compound that acts at the sensory receptors of the skin, relieving the uncomfortable sensations of sensitive skin. This innovative compound has been the result of several years of scientific research (Notes 3, 4, 5) by the Sensory Neurobiology group of the Institute for Research, Development and Innovation in Health Biotechnology of the Miguel Hernández University of Elche.
- Sunflower oil: emollient extract rich in vitamins E, A, D and C that helps regenerate the damaged skin barrier, providing great hydration to the skin.
- Vitamin E: its high antioxidant power prevents oxidative damage and helps soothe sensitive skin.
- Caprylic/Capric Triglyceride
- Glyceryl Behenate
- Glyceryl Stearate
- PEG-40 Hydrogenated Castor Oil
- Ethoxydiglycol
- Hydroxymethoxydibenzyl Glycolamide Pelargonate

How should I use Oncapsisens?

Oncapsisens should be used topically, in areas of the skin where you have dryness, deterioration and hypersensitivity. You should apply Oncapsisens twice a day. The effects of Oncapsisens will be noticed two or three weeks after its use.

We have carried out studies with volunteers who used Oncapsisens[®] during chemotherapy treatment and

no interferences have been observed.

Oncapsisens[®] can continue to be used once the treatment has ended, especially if the skin continues to be unbalanced or uncomfortable.

Oncapsisens[®] can be combined with other topically applied products. However, if you are taking any medication, it is important that you consult with your oncologist first and follow their recommendations.

Is the effectiveness of Oncapsisens proven?

In a study of Oncapsisens[®] carried out in several hospitals in the Valencian Community with people who suffered from hypersensitivity derived from chemotherapy treatment:

- 90% of the participants improved their Dermatological Quality of Life Index, which measures the impact of skin discomfort on quality of life, after using the cream.
- 80% of the participants reported feeling relief in the sensations that bother them when using the cream.
- 75% of patients were more satisfied with their skin after using the cream.
