Its focus on quality, ecological products and health defines its commitment as a responsible and consistent company. They offer fresh and organic vegetable foods, such as tofu and seitan, guaranteeing quality and contributing to a healthy and environmentally friendly diet.*

### DESCRIPTION

At **NATURSOY**, a deep passion is manifested for a dream: to provide people with **healthy, ecological, tasty and high-quality food**. For this reason, every detail of each process is taken care of with care and dedication.

The commitment to quality, ecological products and health constitutes the reason for being of NATURSOY. In this company these three elements converge, becoming its fundamental pillars and defining it as a committed, responsible and coherent entity.

NATURSOY is dedicated to the production of fresh and organic vegetable foods, such as tofu, seitan and their derivatives, with a permanent commitment to the highest quality and trust. In this way, it actively contributes to satisfying the need for healthy eating based on respect for both people and the environment.

At NATURSOY, respect for the environment has always been the foundation and the most outstanding value. All of its products are certified by official organizations in charge of supervising organic agricultural production.

The company considers respect for the environment to be its guiding principle and its most essential value. Organic food rescues many of the original principles of agriculture, but incorporates contemporary knowledge and technology.

When these two elements are combined, a diet is achieved that dispenses with pesticides, fungicides and other unnatural treatments, taking into account the environment, people and the land, and is prepared following sustainability criteria.

At NATURSOY, it is understood that quality not only benefits those who consume the products, but also those who make them.

## SOY

The company does not pursue quality solely with the aim of improving its products; considers that quality not only satisfies consumers, but also provides satisfaction to those who participate in its production.

The conviction is held that when work is done with excellence and offered to society, it returns the favor in some way, following a law of balance that constantly operates in nature.

If a product does not meet the company's quality standards, it is not marketed. For this reason, in some cases very artisanal production processes are maintained, which is perceived as a hallmark of authenticity.

Although there are more efficient and faster production methods, at NATURSOY we believe that it is our responsibility to use them only if they guarantee keeping the quality level intact.

At NATURSOY, it is understood that quality not only benefits those who consume the products, but also those who make them.

responsibility to use them only if they guarantee to keep the quality level intact.

At NATURSOY, concern for health is a constant priority.

When developing a product, careful consideration is given to which ingredients will be used, always taking into account the nutritional pyramid. The aim is to mainly use ingredients from the base of the pyramid to guarantee balanced nutrition in the final product.

The company's focus is not limited to what is consumed occasionally, but to what is consumed daily. Therefore, it is essential that the ingredients of a product are recognizable and understandable to consumers. In the field of organic food, there is full knowledge of all the components of the food that is consumed.

Concern for the environment, ecological products and quality inevitably guides the production of respectful products at NATURSOY.
