

*Viprosan is a plant-based food supplement that is used to treat prostate problems.*

### DESCRIPTION

#### What is Viprosan for?

Viprosan is used to treat prostate problems naturally.

The prostate is a gland located below the bladder and near the male genital organs. It partially envelops the urethra and, in young adults, is about 2 to 3 centimeters in diameter and weighs less than 20 grams. Over time, it can increase in size and form an adenoma, which compresses the urethra and makes it difficult for urine to flow through it. It is important to note that obstruction does not always depend on the size of the prostate, as even small prostates can cause significant problems, while large prostates sometimes have less obstructive effect.

#### What is the composition of Viprosan?

- African plum (*Pygeum africanum*) is 100 mg.
- Sabal serrulata (*Serenoa repens*) is 100 mg.
- Epilobium (*Epilobium angustifolium*) is 100 mg.
- Bearberry (*Arctostaphylos uva-ursi*) is 50 mg.
- Green nettle (*Urtica dioica*) is 50 mg.
- Pumpkin (*Cucurbita pepo*) is 43.38 mg.
- Zinc sulfate 4.12 mg.

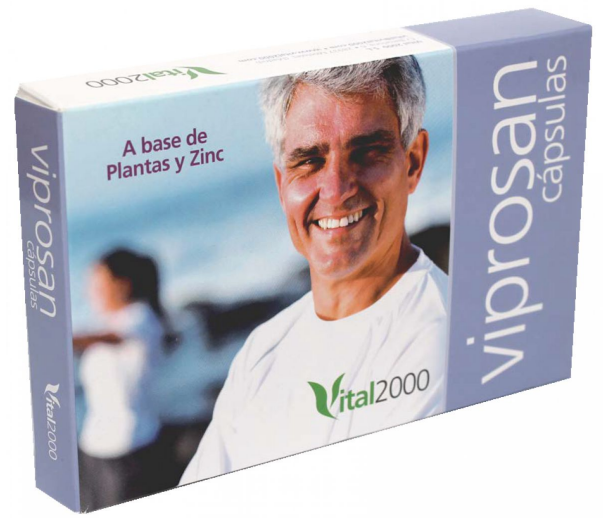

- **Sabal serrulata (Florida Palm):** These fruits have anti-inflammatory properties that help the prostate, promoting its regeneration and reducing inflammation. They can also relieve symptoms associated with prostate problems and help before surgery.

- **Pygeum africanum (African plum):** The bark of this tree has a compound that reduces prostate inflammation and promotes tissue regeneration. It is useful for treating prostate problems, both before and after surgery.

## VIPROSAN 60 Caps

EAN: 8436029341893    FABRICANTE: VITAL 2000

- **Arctostaphylos uva-ursi (Bearberry):** Contains substances that fight infections, so it is recommended for urinary infections and prostatitis, which sometimes occur in cases of enlarged prostate.
- **Epilobium angustifolium (Epilobium):** The aerial parts of this plant help reduce inflammation and improve urinary symptoms in prostate problems.
- **Urtica dioica (Nettle):** The roots of this plant reduce prostate enlargement and may be useful in the treatment of prostate problems, as well as after surgery.
- **Pumpkin (Cucurbita pepo):** A compound present in pumpkin seeds decreases inflammation and prostate enlargement by preventing prostate cells from dividing.
- **Zinc:** Zinc deficiency can contribute to an enlarged prostate.

### What is the recommended daily dose?

Take 2 capsules a day before meals.
